TraderTools vs Dilution Tracker: Full Comparison (2026)

SEC - Tools & Comparisons - March 22, 2026

Head-to-head: TraderTools vs DilutionTracker on SEC filing speed, dilution scoring, warrant alerts, and ATM detection. TraderTools is free - here is how it stacks up.

If you're tracking stock dilution - whether to protect a long position, screen for short setups, or simply stay ahead of micro-cap capital raises - you've probably encountered both TraderTools and DilutionTracker. They sound similar but serve meaningfully different use cases. This comparison breaks down the real differences: pricing, ticker coverage, data freshness, features, and who each tool is actually built for.

Quick Summary

DilutionTracker.com is a solid, well-established research platform with good depth on the stocks it covers - primarily focused on small-cap and micro-cap companies with active dilution histories. TraderTools is a newer platform built around speed, breadth, and accessibility, with timely alerts across a much larger universe of tickers at a significantly lower price point.

? The Short Version

DilutionTracker is a good deep-research tool if you have a focused watchlist of small-caps and don't mind paying $60-74/month. TraderTools covers 8,500+ active tickers with 60-second scanning, a free tier, and plans starting at $19.95/month - a better fit if you need broad coverage, timely alerts, or API access.

Research Depth (covered stocks)

Good

Strong historical depth

Pricing

This is the starkest difference between the two platforms. DilutionTracker runs $60-74/month depending on the plan. There's no free tier - you're paying from day one.

TraderTools offers:

* Free tier - limited access, useful for testing the platform before committing
* Basic plan - $19.95/month - covers most individual investor use cases including timely alerts and the DilutionScore? system

* Premium plan - $39.95/month - adds API access, extended history, and advanced filtering

Even at the Premium tier, TraderTools is cheaper than DilutionTracker's entry price. For traders watching a large number of tickers or those just getting started with dilution tracking, the cost difference matters.

?? A Note on "Value"

Price per month isn't the only cost metric. If DilutionTracker's research depth helps you avoid one bad trade, it could be worth multiples of its subscription fee. The right question is: what's your actual workflow?

Ticker Coverage

DilutionTracker covers approximately 2,300 stocks - primarily micro-cap and small-cap names with active dilution histories. If your watchlist is concentrated in this space, coverage may not be an issue. But if you're tracking a broader universe - mid-caps, OTC stocks, stocks you're researching for the first time - you may find gaps.

TraderTools monitors 8,500+ active tickers across the full range of US-listed equities, including micro-cap, small-cap, and mid-cap companies. If a company files with the SEC, there's a high probability TraderTools is watching it. This breadth is particularly useful for:

* Scanning for new dilution setups you haven't already identified
* Monitoring stocks outside the traditional small-cap dilution universe
* Checking a ticker that's new to your radar without hitting a coverage wall

Understanding which filings to track is also important - our explainers on shelf registrations and ATM offerings cover the core filing types that drive dilution risk.

Data Speed & Freshness

This is arguably the most important factor for active investors. Dilution events - new ATM programs, warrant exercises, PIPE financings - move stock prices fast. Getting an alert 30 minutes after the filing hits EDGAR is very different from getting it 24 hours later.

DilutionTracker operates primarily on delayed or end-of-day data. For investors doing longer-term research, this is often fine. For traders who need to act before the market fully prices in new dilution risk, delayed data is a meaningful disadvantage.

TraderTools scans SEC EDGAR every 60 seconds. When a new filing drops - a 424B3 prospectus supplement, a Form S-3, an 8-K with material events - alerts go out within minutes. This is closer to institutional-grade latency than what most retail-focused tools provide.

? Why Speed Matters

A company files a new ATM prospectus at 8:47 AM. By 9:00 AM, market makers have already adjusted. By 9:30 AM when the market opens, the information is in the price. A 60-second scanning interval means you have a shot at acting on information before it's fully priced. EOD data means you're reading yesterday's news.

Features & Filing Types

DilutionTracker focuses on what the name implies - tracking dilution. It provides solid historical data on equity raises, reverse splits, and outstanding share changes for the stocks it covers. For a researcher building a picture of a company's historical capital structure, this depth is genuinely

useful.

TraderTools casts a wider net across 25+ filing types, including:

* ATM programs (424B3, 424B5) - the most common form of silent dilution
* Shelf registrations (S-3) - tracked via the Shelf & ATM Monitor
* PIPE transactions - private placements often at a discount, surfaced in the PIPE Tracker
* Warrant exercises - dilutive events tracked in the Warrant Activity Monitor
* Reverse stock splits - frequently a precursor to further dilution
* Insider transactions (Forms 3, 4, 5) - insider buying and selling signals
* Material events (8-K) - broad corporate event monitoring
* Earnings reports - 10-Q and 10-K with cash runway analysis

The DilutionScore? is a composite risk metric that TraderTools generates for each tracked company - pulling together active ATM programs, current cash runway, warrant overhang, recent share issuance history, and other factors into a single score. DilutionTracker doesn't have an equivalent single-metric risk assessment.

AI-powered filing summaries are another TraderTools differentiator. When a new filing hits, the platform generates a plain-language summary of what the filing says and what the dilution implications are - useful for quickly triaging a large volume of alerts without reading every document manually.

API & Mobile Access

DilutionTracker is a web-only platform. There's no API for integrating dilution data into your own tools, spreadsheets, or algorithmic systems. No mobile app either - you're tied to a browser.

TraderTools provides API access through separate API plans (from $79.95/month), allowing you to pull dilution alerts, DilutionScore? data, and filing information programmatically. This is meaningful for:

* Traders running custom alert systems
* Developers building portfolio risk dashboards
* Quants incorporating dilution signals into screening models

The TraderTools web app is also designed to be fully functional on mobile, making it practical for checking alerts on the go - something the desktop-focused competitors don't prioritize.

Who Wins for Which Use Case

Choose TraderTools if:

* You need broad coverage across thousands of tickers, not just a curated small-cap list
* Real-time or near-timely alerts matter to your trading strategy
* You want to start with a free tier before committing
* You need API access for custom integrations
* You're tracking multiple filing types beyond pure dilution events
* Price is a factor - $19.95/mo vs $60-74/mo is a real difference

Consider DilutionTracker if:

* Your watchlist is concentrated in the micro-cap space they cover well
* You do primarily historical research rather than real-time monitoring
* You value deep historical share count data for stocks in their coverage universe

? Not Mutually Exclusive

Some serious dilution researchers use both - TraderTools for timely alerts across a broad universe, and DilutionTracker for deep historical context on specific names. But if you're picking one, the price/coverage/speed math favors TraderTools for most active investors.

Frequently Asked Questions

Is TraderTools a DilutionTracker alternative?

Yes - TraderTools covers similar core functionality (tracking dilutive SEC filings) with broader ticker coverage, faster data, a lower price, and a free tier. The main trade-off is that DilutionTracker has deeper historical data on the specific stocks it covers.

Does DilutionTracker have an API?

No. DilutionTracker is a web-only platform with no API access as of 2026. TraderTools offers API access through separate plans starting at $79.95/month.

How many stocks does DilutionTracker cover vs TraderTools?

DilutionTracker covers approximately 2,300 stocks. TraderTools monitors 8,500+ active tickers across US-listed equities.

How fast are TraderTools alerts compared to DilutionTracker?

TraderTools scans SEC EDGAR every 60 seconds and sends alerts within minutes of a new filing. DilutionTracker operates primarily on delayed or end-of-day data.

What is DilutionScore??

DilutionScore? is TraderTools's composite risk rating for each tracked company. It factors in active dilution programs, cash runway, warrant overhang, and historical issuance patterns into a single score for quick risk assessment. DilutionTracker does not have an equivalent metric.

Can I try TraderTools before paying?

Yes. TraderTools has a free tier that lets you explore the platform before upgrading. DilutionTracker does not offer a free tier.
